A BUYING GUIDE

374 Lt Bourke Street, Melbourne 3000 | (03) 9600 0599 | bogong@bogong.com.au | bogong.com.au

There are all kinds of adventures: small ones, big ones, extreme ones. That's why, when it comes to sleeping bags, there's such a huge variety. Which should you choose? Down? Synthetic? What's loft? And, what features do you need? Our friendly, knowledgeable staff are here to help you find a sleeping bag that caters to the warmth, weight, quality and budget that you require.

HOW TO CHOOSE

Sleeping bags tend to be categorised by seasons. For example, a three-season sleeping bag is recommended for use for three out of four seasons in a year (usually, that's summer, autumn and spring). At Bogong, we stock two-, three- and four-season bags, as well as expedition sleeping bags for extreme conditions.

- **Two-season bags** are typically very lightweight. They're designed for summer or spring activities in warm climates, to a lower comfort temperature range of approximately 0°C.
- **Three-season bags** are mid-range bags. They're designed for activities such as travel and bushwalking, where you're expecting mild to cooler conditions to a lower comfort temperature range of about -8°C.
- **Four-season bags** are for cold conditions. They're designed for activities such as bushwalking, ski touring or mountaineering, where cold conditions may be anticipated to a lower temperature range of approximately -20°C.
- **Expedition bags** are for cold conditions. They're designed for activities like ski touring or mountaineering where cold conditions that may dive lower than about -25°C.

SEPTEMBER 2023

CARE FOR YOUR NEW SLEEPING BAG

A down sleeping bag is not difficult to look after. In fact, with the correct care, you can greatly increase your sleeping bag's life:

- Avoid storing your sleeping bag in its stuff sack. If you have the room, hang it in your wardrobe or keep it folded on a shelf. If you have limited space, store your sleeping bag in a pillow case or purchase a mesh storage bag from us.
- Always use a sleeping bag liner to keep your sleeping bag clean. Dirt and body oils reduce the loft greatly. Liners are often cotton, silk or a cotton/silk blend. Silk liners are the lightest and most compact option.
- A well-used sleeping bag should be washed a few times during its life. It's far easier to get a professional to do this (we recommend Remote Repairs). If you do elect to wash your bag yourself, follow washing instructions provided on the sleeping bag and use only recommended down washes, such as Nikwax Down Wash Direct, available at our store.

TRAVEL & BUSHWALKING BAGS

Zodiac 350

Zodiac 500

Zodiac 700

ZODIAC SERIES LOFT 680-750

Primarily designed as lightweight travel sleeping bags, affordably priced. With generous proportions and features, sleeping bags in the Mont Zodiac range are also ideal for bushwalking.

- Ethically sourced 680-750 loft down
- Tapered-rectangular cut for room to move
- Box-walled construction for warmth
- Toaster pocket for air-activated heat pad
- Ovendoor foot venting system
- Full-length side and foot zips
- No cross block baffle for down distribution
- Oversized 3D zip draft tube with anti-snap
- Sewn with hydrophobic Epic Thread
- 3D foot section for greater comfort and reduced cold spots
- Supplied with ultralight Mont siliconised nylon compression sack
- Large poly/cotton storage bag supplied

BUSHWALKING BAGS

BRINDABELLA XT SERIES

This series is made for bushwalkers and ski tourers. Sleeping bags in the Brindabella Series offer versatility. These bags have lots of technical features to maximise warmth, plus the ability to fully ventilate.

Features

- Tapered-rectangular cut means a wide foot section for room to move.
- Radial Arc Baffle System maximises baffle loft height.
- Differential cut between inner and outer reduces compression and cold spots.
- *Vertical baffles* on torso maintain down distribution for maximum warmth.
- Continuous lower baffles allow flexible down distribution between the base and canopy.
- Box-walled baffles for warmth.
- Large, down-filled '3D' draft tube along zip retains heat.
- Contoured hood with down-filled muff.
- Internal down-filled shoulder collar.
- Toaster Pocket in foot for inserting an air-activated heat pack (not included).
- Tuck-stitched baffles for seam strength.

About the materials

FILL 785–850 loft, 95/5 premium white duck down. Ethically sourced (Responsible Down Standard certified) down is treated with DWR for water resistance.

OUTER Updated (2019) Hydronaute XT™ fabric: 20,000mm waterhead; 20,000g/m²/24h breathability.

INNER Ultralight, silk-touch 15-denier downproof nylon.

ZIP Full-length YKK side zip with dual sliders and foot zip, with laminated 210-denier anti-snap shield along zip.

THREAD Sewn with hydrophobic Epic Thread to prevent moisture wicking along seams.

SACKS Includes ultralight, siliconised nylon compression stuff sack and 50L poly/cotton storage sack with care/washing instructions.

Hydronaute XT™: More Waterproof. More Breathable.

Hydronaute XT™ is a waterproof, breathable fabric designed especially for sleeping bags. It's not only waterproof, but also windproof, which adds to the warmth of the bag by creating dead air inside the bag where the down is. Hydronaute XT™ protects down from moisture on the outside, but it's on the inside of the bag where Hydronaute XT™ really proves its worth. Moisture vapour produced by the body can condense in the down of the sleeping bag reducing its ability to loft. With Hydronaute XT™, moisture vapour is pulled through the membrane via a molecular chain, keeping down drier, maintaining loft and ensuring a more comfy sleep. In 2019, Hydronaute XT™ was updated. It's now more water-resistant than ever, and even more breathable.

*XL bags usually have an extra 100 grams of fill

ALPINE BAGS

Spindrift

**LOFT
825-850**

SPINDRIFT SERIES

The Mont Spindrift Series sleeping bags are available in multiple weights appropriate for alpine camping, basecamps and high-altitude mountaineering.

Features

- Down distribution: 55% canopy; 45% base.
- Cross-block baffles prevent down shift.
- Radial Arc lower horizontal baffles maximises baffle loft height.
- Differential cut between inner and outer reduces compression and cold spots.
- Box-walled chambers for warmth.
- Twin interlocking down-filled '3D' draft tubes along zip retain heat.
- Contoured hood with down-filled muff.
- Internal down-filled shoulder collar.
- Drawcords on hood.
- Toaster Pocket in boxfoot for inserting an air-activated heat pack (not included).
- Tuck-stitched baffles for seam strength.
