

sleeping mats

A BUYING GUIDE

374 Lt Bourke Street, Melbourne 3000 | (03) 9600 0599 | bogong@bogong.com.au | bogong.com.au

Bogong has been Melbourne's leading store for technical equipment for many years. We have over 30 models of sleeping mats, featuring all the latest, state-of-the-art design innovations. We have sleeping mats for a range of uses; from travel, lightweight bushwalking and base camping, to serious mountain expeditions. No other store carries such a wide range of quality brands and models. Come and talk to us!

CHOOSING THE RIGHT MAT

A quality sleeping mat is one of the most important purchases you will make. Sleeping mats have come a long way in the last few years. Since the days of the old "foamie" there is now a vast array of innovative mat options available on the market. Having the right mat for your outdoor activities will help make every trip a comfortable and enjoyable one – so, it pays to get it right. Finding the right combination of weight, durability, comfort and price can be daunting. At Bogong we can help you choose the right mat to match your type of adventure.

OCTOBER 2021

TO HELP YOU CHOOSE

In What Conditions Do You Plan To Use Your Mat? If you usually head out into cold environments – like ski-touring alpine Victoria or winter bushwalking – you'll need a mat to cope with cold conditions. You'll need a warm, insulated mat that is compact and durable. On the other hand, if your idea of a weekend away is car camping and a bit of fishing, you might be interested in one of our larger, thicker and more luxurious mats, ideal when space and weight is not your main concern.

Exped DownMats – Exped's premier down insulated mat range with inbuilt pump. Infinitely warmer and more compact than any other comparable mat of similar weight.

CHOICE OF BRANDS

At Bogong we offer an outstanding choice of the world's leading brands. Each brand has different strengths: some are more suited to your needs than others. Beware of 'one brand' stores. It's harder to offer independent advice on the best mat for your needs with a limited range. As a truly independent store, we've carefully selected the best brands for all users. We have firsthand knowledge of the products we sell, because we use them too!

EXPERIENCED STAFF

Bogong staff are handpicked for their wide experience in all outdoor situations. We can advise you on your mat requirements for any situation because we get out there ourselves. From Patagonia to the Grampians, chances are, we have a staff member who has been there and can give you the practical advice you're after.

RECENT DESIGN INNOVATION

Innovations in mat design over the last 10 years now mean that there are numerous options available for just about every circumstance. For example Exped's down-filled and synthetic inflatable mats provide a warm, thick cushion of air that helps smooth out uneven ground. This provides a level of comfort never before seen in a compact insulated mat. And for those where light weight is everything, the Thermarest Neo-Air X-Lite – weighing in at 350 grams – is one of the lightest mats on the market. A reflective barrier in this mat returns warmth to your body and reduces heat loss to the ground, keeping you three times warmer than any other non-insulated air mattress. We also stock other well known models such as the Thermarest ProLite series and Thermarest closed-cell mats.

THERMAREST Pioneering Innovation. Unmatched Quality.

Driven by the need to get a better night's sleep outdoors, the founders of Cascade Designs invented the revolutionary self-inflating Therm-a-Rest® mattress. Lightweight and portable, it allows mountain climbers and outdoor enthusiasts to sleep better in warmth and comfort.

Thermarest ProLite Plus

When staying warm is as important as keeping your pack light, the ProLite Plus mattress is the perfect solution. Using patent-pending foam-perforating technology, Thermarest created this mattress to provide exceptional warmth – up to 20% more than previous ProLite 4 mattresses, without added weight. It's substantial enough to keep you comfortable while mountaineering or on ski tours, yet rolls up small and light.

- Added Warmth: Unique, diagonal-cut foam provides the most efficient insulation possible.
- Light and Compact: Tapered design and high-performance foams eliminate excess weight and roll up into an ultra-compact unit.

Thermarest ProLite Plus Women's

The Women's ProLite Plus brings the comfort and added warmth you need for cold-weather mountaineering and ski tours. It's size-specific to save weight and space. Plus, Thermarest added insulation in the torso and feet, where research has shown you need it most. Thermarest's new patent-pending diagonal-cut foams are more efficient than anything they've used before and provide up to 20% more warmth overall, with no added weight.

- Added warmth: Unique, diagonal-cut foam provides the most efficient insulation possible, while added warmth in the torso and feet addresses the specific needs of women.
- Light and Compact: Tapered design eliminates excess weight and rolls up compactly.

Thermarest ProLite

Thermarest's ProLite™ mattresses are tailor-made for anyone seeking three-season comfort with a priority on minimal weight, maximum compactness and, of course, quality. Now lighter and more compact than their previous ProLite 3 mattresses, weight is the only thing you'll find missing. You still get the reliable performance and comfort you need, after the kind of high-mileage, high-speed journeys where the ProLite does best.

- Travel Light: Innovative materials create a mattress that's 20% lighter than previous ProLite 3 mattresses.
- Save Space: Die-cut foam eliminates excess weight and rolls up ultra-compact.

Thermarest ProLite Women's

Designed with extra insulation in the torso and foot, Thermarest's Women's ProLite mattress adds warmth exactly where our testing shows that women need it. It's tailor-made for women who want three-season comfort with a priority on minimal weight and maximum compactness. Now lighter and more compact than previous Women's ProLite 3 mattresses, weight is the only thing you'll find missing. You still get the reliable performance and comfort you need, after the kind of high-mileage, high-speed journeys where the ProLite does best.

- Travel Light: Innovative materials create a mattress that's 20% lighter than previous Women's ProLite 3 mattresses.
- Save Space: Die-cut foam eliminates excess weight and rolls up ultra compact.

Thermarest RidgeRest

A modern twist on the traditional foam mat. The Ridge Rest comes in two thicknesses; the Solar range at 20mm and the Solite at 15mm. Its unique ridged pattern traps more heat and provides more comfort than any flat foam mat and is practically indestructible. Use it as your only mattress all summer or pair it with a small ProLite mattress for lightweight and reliable all-season use.

- Travel Light: Lightweight foams reduce weight for situations when every gram counts.
- Sleep Anywhere: Closed-cell foams provide unmatched reliability for use on any surface without worry.

- Keep Warm: Valleys trap warm air against your body, while the ridges make a softer sleeping surface.

Thermarest Z-lite

Thermarest's ultralight three-season camping mattress is perfect for those go-anywhere, sleep-on-anything treks and bivvies where every gram counts. All-new proprietary foams are softer on top for extra comfort and denser on the bottom for extra durability, and the accordion shape packs more comfort into a smaller space than any other closed-cell foam mattress out there.

- Travel Ultralight: Weighing under 500 grams, this mattress goes anywhere.
- Packs Small: Accordion-style design packs lots of comfort into as small a space as possible.

THERMAREST Pioneering Innovation. Unmatched Quality.

Thermarest's Fast & Light® mattresses allow you to experience unrivalled comfort without compromising your goals. They weigh little and pack small, facilitating high-speed, low-weight trips.

Thermarest Neo-Air XLITE

NeoAir™ technology changed what people expect from a backcountry mattress. Warm, comfortable and extremely lightweight, Thermarest's next-generation NeoAir™ mattress delivers even greater performance than the original. The streamlined shape makes the XLite™ mattress ultra light and highly packable, while continuing to provide the comfort you need in the backcountry. Stuff sack and repair kit included.

- Lightweight: the lightest mattress in the NeoAir™ collection – almost 15% lighter than the original.
- Ultra-packable: Low-bulk materials make the XLite as packable as a water bottle!

Thermarest Accessories

Chairs: The Trekker Chair provides the essential comfort of a chair in a modular form that's easier to pack and designed to be removed when not in use. Set-up is fast and easy. Comfortable, durable and light.

Pillows: Thermarest's Compressible Pillow™ offers unprecedented portable comfort. It packs smaller and expands bigger than ever – perfect for everyone from trekkers and travellers, to car campers.

Coupling Kit: The Universal Couple Kit securely holds any two Thermarest mattresses side-by-side (20–30" wide), making it perfect for couples who want to sleep close but don't want to get stuck in the gap between mattresses in the middle of the night.

EXPED

THE MAXIMUM OUTDOOR EXPERIENCE WITH MINIMAL MEANS...

Exped means Expedition Equipment – The Exped Team are passionate outdoor enthusiasts. They have been developing gear for expedition, backpacking and everyday use since 1997. Exped's ethos is about minimalism: the best materials and design, refined back to the basics. If you like clean design combined with maximum functionality, you will love Exped.

WELCOME TO THE WORLD OF EXPED Sleeping Mats

Exped pays special attention to every high quality detail in order to produce mats that are warm, comfortable, lightweight, durable and very compact. This is a challenge Exped takes very seriously because rough awakenings lurk when mats malfunction! There are over 23 mats in the Exped collection, ranging from the flagship DownMats to the UL (Ultra Light) models to the luxurious SIM Comfort range. Exped mats have won numerous outdoor equipment industry awards around the world.

Five-Year Warranty:

Five years limited warranty on materials and workmanship, except on Ultra Light mats that carry a two-year warranty.

FlatValve Technology:

Rapid inflation and deflation is assisted by the integrated one-way valves. They are easy to use and lightweight.

Optimised packaging:

Mats are packaged as compactly as possible during manufacture without making the stuff sack too small for re-packing in the field.

The maximum outdoor experience with minimal means.

Exped DownMats – Exped's premier down-insulated mat range with inbuilt pump. Infinitely warmer and more compact than any other comparable mat of similar weight.

Exped DownMat UL (Ultra Lite) – This the ultralight version of the DownMat, sporting identically high R-Values. Yet weight and packed size are in a league of their own.

Exped SynMats – Not as warm as DownMats, but offer the same comfort, low weight and compact packed size. The weight-to-warmth ratio is far superior to standard foam filled sleeping mats.

Exped Ultra Light SynMats – For those looking for the ultimate in lightweight performance. Only 460g for a full-length comfort mat.

SIM Comfort – The ultimate in comfort. Perfect for base camping, car camping and ideal as guest bed at home.

SIM Lite – "SIM" stands for Self Inflating Mat: traditional-style mats with hollow air channels, resulting in reduced weight and bulk. Comfortable, slip resistant, well priced and durable.

DownMat – Exped's Flagship model

Sown insulation inside DownMats mat dramatically reduce heat loss as demonstrated by EMPA, the Swiss Federal Laboratories for Materials Testing and Research. A thick cushion of air also provides comfort and smooths out uneven ground. Since down compresses extremely well, DownMats pack smaller than other insulated mats. Exped only uses IDFL-certified goose down, specially treated to eliminate the effects of humidity that may reach the mat's interior.

- DownMat is unmatched for winter camping and sleeping on snow.
- You can use a lighter weight sleeping bag with a DownMat to achieve consistent overall comfort, and still reduce weight and bulk.
- FlatValve technology.
- Seams are high-frequency welded for durability.

DownMat UL (Ultra Lite)

The DownMat UL series offers the same warmth as the standard DownMat, at a 25% weight saving. So, if you want a high performance, really light mat, this is the one for you. Like all ultralight products, there are compromises. Choose carefully.

- No integrated pump like the DownMat. Pump bag included.
- Fabric is much lighter, therefore less durable.
- Two-year guarantee (five years for standard mat).
- Convenient inflation and deflation valves using FlatValve technology.

SynMat

These microfibre-filled air mats are super comfortable, warmer and lighter than comparable mats. Because the fibre compresses well, these mats also pack extremely small. The SynMats do not reach the insulating properties of the DownMats, but offer the same comfort, low weight and compact packed size. They come at a lower price point, because synthetic fibre is lower cost than goose down found in DownMats. Still, the weight-to-warmth ratio is far superior to standard foam-filled sleeping mats.

- FlatValve Technology;
- Integrated pump
- Repair kit included

SynMat Ultra Light (UL)

These air mats filled with synthetic fibre are comfortable and super lightweight. The mats pack down small thanks to exceedingly compressible microfibre. The new ultra light fabrics are extremely lightweight yet robust. The abrasion resistance is high however puncture resistance is lower than with the standard mats. Not as warm as standard Synmats or Downmats but still fine for most Australian hiking conditions.

- High frequency welded seams; Repair kit included; Flat Valve Technology; Schnozzel Pumpbag included

SIM Comfort

These self-inflating mats are exceptionally comfortable and ideal at base camp or in a camping van. They are also the ideal back-up guest bed at home. Supersoft but durable fabric: the resilient Polyester Tricot fabric with embossed honeycomb structure is comfortable next to skin and slip resistant. The laminated air block film is of PU-Ether. It is absolutely hydrolysis resistant making it leakproof even if humidity accumulates during inflation. These self-inflating mats covered in velvet soft Tricot fabric are really thick and sinfully comfortable. They are surprisingly lightweight thanks to air cores in the foam.

- All models feature Velcro strips on the side seams that allow two or more mats to be joined together.

SIM Lite

Hollow air channels make these self-inflating mats extremely lightweight. The FlatValve Technology that has proven itself in Exped's baffled mats is also used in this range. Exped is the first manufacturer worldwide to incorporate these durable, easy-to-use valves in self-inflating mats. Two flat valves, one for inflation and one for deflation are utilised in the mat. One-way flaps on the valves hinder air from escaping during inflation, and prevent air from re-entering during deflation and roll-up.

- FlatValves are designed to be flat and non-protruding.
- Made of soft PU without sharp edges, these valves are more durable than traditional ones.

Maximum outdoor experience, minimal means.

The DownMat and UL (Ultra Light) range has won a number of European Outdoor Gold Awards.

LOOKING AFTER YOUR MAT

HOW DO I INFLATE MY SLEEPING MAT?

There are various types of sleeping mats with different methods of inflation. Some are self-inflating – such as mats within the Thermarest range – while other mats require a pump to inflate them or they may be inflated by mouth. For example some mats within the Exped range have a pump that is actually built into the mat itself. It's important to follow the inflation instructions provided by the manufacturer. Inflating and deflating your mat inside your tent will limit your mat's exposure to potential punctures. If you're leaving your mat set up in your tent for a period of time, remember to partially deflate it since heat may cause your mat to expand, thereby potentially damaging the internal structure.

HOW DO I CLEAN MY SLEEPING MAT?

We recommend cleaning your mat with warm water and a mild detergent (no bleach!). Using a rag or soft sponge, carefully clean the mat. Make sure all valves are fully closed. Rinse well. The mat should air dry after cleaning. Do NOT put your mat inside a washing machine or dryer.

HOW DO I STORE MY SLEEPING MAT?

Just like any other piece of gear, your sleeping mat will reward you with years of service if you take good care of it.

Firstly, ensure your mat is completely dry before storing it, to avoid mildew. You need a reasonably cool storage place – excessive heat can destroy the lamination that holds the mat together – in a wardrobe or under the bed is ideal. The best way to store your sleeping mat is unrolled, with the valve open. This allows the fill to breathe and maintain its loft and warmth for years to come.

WARRANTIES

At Bogong we stand behind the products we sell. If you have a problem with a product that you have purchased from us, please tell us so that we can remedy it. See our website for our complete warranties policy.

SO, WHAT IS THE STORY ON MATS?

Exped UL series have a two-year warranty. All other Exped mats have a five-year warranty. Thermarest mats do not have a specific time limit on their warranty.

There is no warranty on mats for punctures, damage caused by sitting hot cooking pots on them or leaving them inflated with the valve closed in the hot sun. Valve issues, delaminations and fabric faults are the most likely cause of warranty issues with mats.
